## Reference Letter

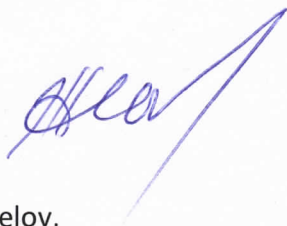

To Whom It May Concern:

Data Warehouse and Business Intelligence solutions provide necessary information to the business users and ability to analyze it and take informed decisions on strategic, tactical and operational level. We started DW/BI Project with targets to consolidate data from multiple disparate sources, to ensure harmonized and consistent data, unified algorithms for calculation of transversal and specific indicators, to store data and keep history on most detailed level.

BI Partner helped us with the solution architecture, covering four architecture domains – functional architecture, based on bank strategy and mission, data architecture with definition of all solution layers, applications architecture with processes and applications in back/front rooms, technical architecture with three environments for development, test and production. BI Partner also demonstrated deep knowledge and excellent expertise on Oracle Business Intelligence applications.

We regard BI Partner as a trusted and valuable business partner in Data Warehouse and Business Intelligence area and will continue our cooperation with them well into the future.

Sincerely,

Zhivko Angelov,

Head of Business Intelligence
